

## Specific client updates to minimize CAC authentication prompts.

The steps identify settings that will decrease the CAC authentication prompts experienced by users of the TRADOC SharePoint 2010 portals. These settings will only decrease prompts for workstations or clients that are on the NAE, NASE, NASW or HQDA domains.

1. Verify the client machine contains the proper trusted location:  
[HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\CurrentVersion\Internet Settings\ZoneMapKey] contains an entry String Value entry " **https://\*.tradoc.army.mil** " with a value of " **1** "
2. Insure the proper Trusted Location has been correctly set via GPO.
  - a. Run GPedit.msc.
  - b. In Gpedit.msc, navigate to the following setting; Computer Configuration > Administrative Templates > Windows Components > Internet Explorer > Internet Control Panel > Security Page
  - c. Under the Security Page double Click the Site to Zone Assignment List
  - d. Click the Show button
  - e. In Show Contents window, if necessary add " **https://\*.tradoc.army.mil** " with a value of " **1** "

3. Confirm the Trusted Location is set by opening the URL to the location from a web browser, right clicking any blank space, and clicking properties. Confirm Zone: Trusted Sites and Protected mode is Off

4. Insure the client has the proper AuthForwarderServerList registry setting update for the TRADOC servers. If the entry does not exist create one. Locate and verify the following registry subkey:  
HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Services\WebClient\Parameters  
On the Edit menu, point to New, and then click Multi-String Value. Type AuthForwarderServerList, and then press ENTER. Add the following entry to define the TRADOC servers. [https://\\*.tradoc.army.mil](https://*.tradoc.army.mil)
5. A restart of the client will likely be necessary before changes will take effect.
